

SIDING

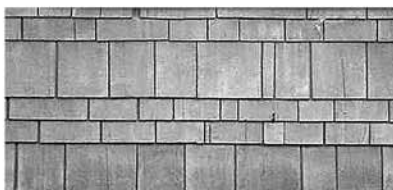

What to Do

- Protect exterior woodwork from the elements with a good paint job. This includes proper preparation and the right kind of paint.

- Match existing siding in material, style, and size, when constructing an addition or repairing damaged goods.

- Avoid aluminum or vinyl siding. They obscure architectural details, can trap moisture inside the wall, and are not maintenance-free (dents and scratches can't be fixed, paint colors fade over time, etc.).

- Remove climbing plants from roofs and walls. Mount climbing plants on trellises and prune frequently to prevent entry into wall crevices and cornices.

... and What Not to Do

CARPORTS & GARAGES

What to Do

- Locate new carports and garages in the rear of the property.

- Do not use temporary carport structures.

- New garages should be unattached.

- Replacement garage doors should match the originals in material, style, and size.
